In the Specification:

Please replace paragraph [0036] of the published application, with the following rewritten paragraph:

--[0036] Color calibrator 44 may then select the RGB values present at the location of marks 92 and may associate these values with the bar code color that was supposed to be printed for that patch. In other words, if color chart generator 42 (Fig. 2) listed that the 5th color 5 was printed for the 7th patch 7 in the 2nd row 2, then color calibrator 44 may associate the RGB value at the 15th division mark 92 of the 3rd line 90 with the 5th color 5 and may store this association in color range database 72. —
